# **Volleyball Ace Desktop**

## **About this Guide**

This guide describes the Volleyball Ace Desktop Tools, which are a companion to Volleyball Ace. These tools provide desktop functionality to edit stats, manually enter stats and do enhanced stat reporting.

Chapter 1 is an introduction to the Volleyball Ace Desktop Tools.

Chapter 2 describes the Volleyball Ace Strategic Analyzer.

Chapter 3 shows the output options of the Strategic Analyzer.

Chapter 4 illustrates how to set up a Strategic Analyzer custom report.

Chapter 5 details exports to MaxPreps and DakStats3000.

Chapter 6 describes player renumbering with the Strategic Analyzer.

Chapter 7 documents the StatEditor application.

Chapter 8 describes the Data Entry Worksheet Excel add-in.

# **Chapter 1**

## **Introduction**

Volleyball stats which been recorded using Volleyball Ace on Apple and Android phones and tablets can be uploaded to a Windows PCs and Macintosh computers for consolidation, analysis, printed reports, export to other tools and output to data files (including web-ready files).

In addition to extended reporting capabilities, the Volleyball Ace Desktop Tools include utilities for editing stats (StatEditor), manually entering stats (Data Entry Worksheet) and player renumbering (included in Strategic Analyzer and StatEditor).

The TeamBuilder application is no longer available, as its capabilities have been replaced by functionality within the Volleyball Ace application itself.

This guide assumes that data has been uploaded to the Windows PC Desktop or the Macintosh Desktop. Instructions on uploading data are included in the Volleyball Ace User Guide, a companion document.

# **Chapter 2**

## **Strategic Analyzer**

The most important of the desktop tools is the Volleyball Ace Strategic Analyzer. This desktop application provides many more types of reports than are available on the iPad/iPhone and Android platforms. It even provides for customization of reports.

In addition to reporting, the Strategic Analyzer also provides options for exporting stat data to MaxPreps and DakStats 3000 tools, eliminating the need for extra data entry.

This chapter will cover basic data selection and reporting within the Analyzer. The following chapters will cover customizing reports, data output, data export and player renumbering. Additional chapters will cover the StatEditor application and use of the Data Entry Worksheet.

# Volleyball Ace Desktop

## Running the Strategic Analyzer - Windows PC Desktop

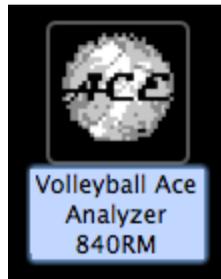

Once the data is on the desktop PC, run the Desktop Analyzer by double-clicking on the **Volleyball Ace icon**. If the icon is not visible on the desktop, click on the **Start button**, put the mouse cursor over the All Programs entry and click on the Volleyball Ace Strategic Analyzer folder. Run the Analyzer by clicking on the Volleyball Ace Strategic Analyzer:

Select one or more sets using the first screen in the Analyzer.

## Running the Strategic Analyzer - Macintosh Desktop

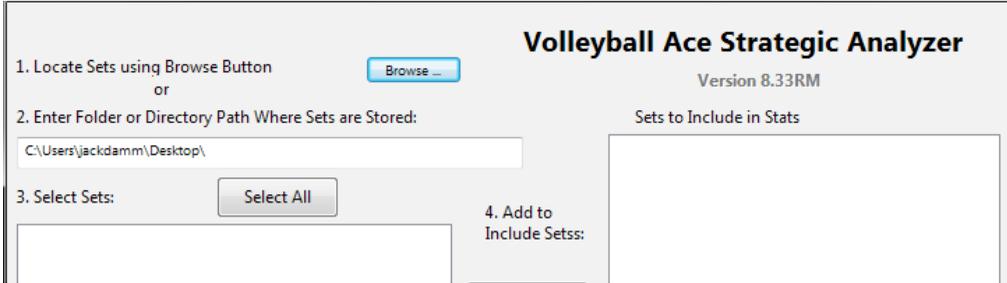

Once the data has been copied to your Mac using iTunes, run the Desktop Analyzer by clicking on the **Volleyball Ace Analyzer icon**. If the Analyzer is not visible, then go to the Applications folder and double-click on the **Volleyball Ace Analyzer icon** there:

Select one or more sets using the first screen in the Analyzer.

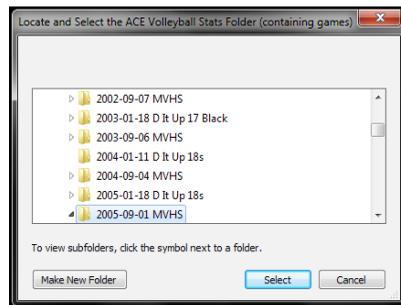

## Browsing to Match Data

If no sets appear in the **Select Sets listbox** you may need to select a different drive or directory in the Analyzer.

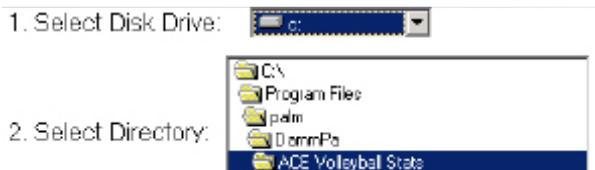

The data transferred to the desktop will be located in the folder where you saved it on the desktop in iTunes (Apple) or via the Windows Explorer (WinPC-Android) or the Android File Transfer utility (Macintosh-Android).

To access the saved set data, click on the Browse button and navigate to the appropriate folder:

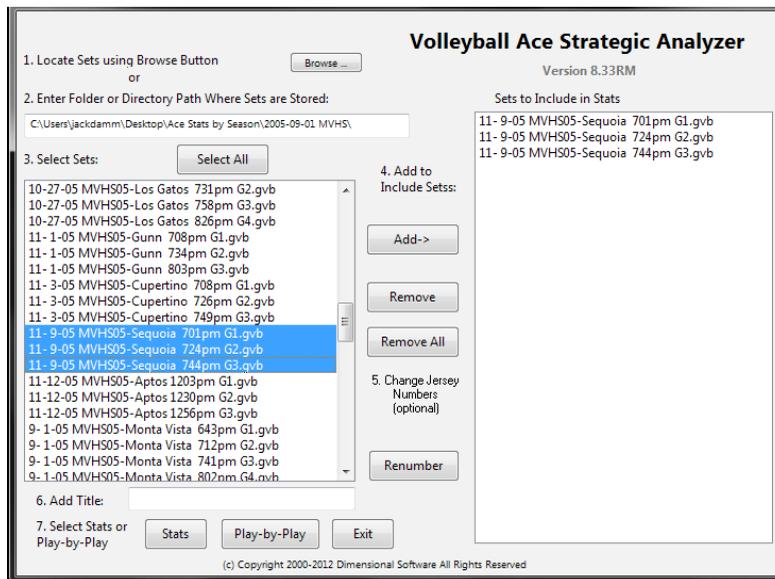

# Volleyball Ace Desktop

Some versions of the Analyzer have a **Disk Drive drop-down** and **Directory list** instead of a **Browse button**. Again, navigate to the appropriate folder:

## Selecting Sets to Include in Stats

Select sets to be included in stats using the first screen of the Volleyball Ace Analyzer. Select sets then click on the **Add button** to add them to the box on the right-hand side.

Note that multiple sets can be selected using shift-click to select a range of sets or control-click to select several sets at once. Click on the **Stats button** to see statistics.

## Strategic Analyzer Reports

The Desktop Analyzer creates more reports than are available on the handheld, including fully formatted box scores, individual player stats, per set average stats, total attempts, earned versus unearned points, first ball stats and a summary of set and match scores.

### Formatted Box Score

Volleyball Ace box scores generated by the Analyzer show all the information required on collegiate box scores, including hitting stats per set and set scores.

Sequoia	15	13	20		

Note: If sets from more than one match are selected, then the hitting per set and set scores are not listed in the on-screen report. Also note that checking the **Print Set List checkbox** causes a list of all sets, set scores and match totals to be printed. (A set list report can also be created on-screen using the Match Scores report).

# Volleyball Ace Desktop

## Player Summary

Player summary reports show stats for individual players all on the same page. Note the **PageDown** and **PageUp** buttons, which scroll through all players in the roster. Also note the **All Pages checkbox**, which affects whether all pages or only the current page is printed when the print option is selected.

## Points per Rotation

The Points per Rotation report shows performance for both the coach team and the opponent. It also includes a sideout % stat for each team.

	Team Serves	Team Points	Team Rotations	Points Per Rotation	Side Out Percent	Opponent Serves	Opponent Points	Opponent Rotations	Opponent PPR	Net PPR	Opponent Side Out %
R1: 1	18	17	10	1.70	50%	18	19	10	1.90	-.20	50%
R2: 14	13	15	6	2.50	61%	13	11	8	1.37	1.13	61%
R3: 9	17	17	7	2.42	87%	8	8	7	1.14	1.28	87%
R4: 4 7	7	7	7	1.00	63%	11	11	7	1.57	-.57	63%
R5: 2	12	13	8	1.62	63%	11	10	7	1.42	.20	63%
R6: 3	28	28	10	2.80	83%	12	12	9	1.33	1.47	83%
Total	95	97	48	2.02	65%	73	71	48	1.47	.55	65%

## Points per Rotation Options

When Points per Rotation is reported for more than one set, the rotations may need to be adjusted to account for different lineups when the team serves versus when the team is in serve receive.

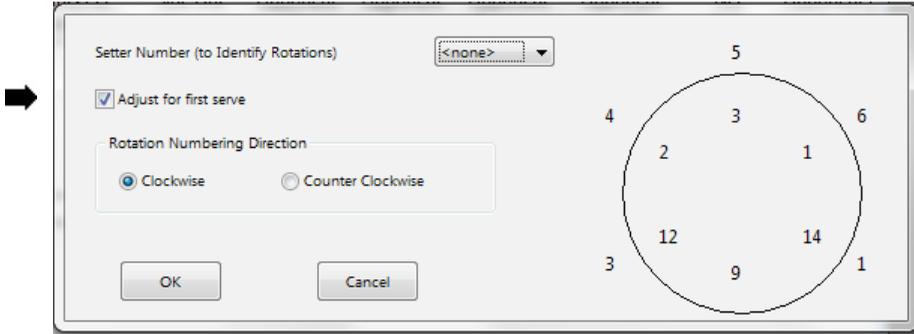

For teams which back-rotate their lineup when they are in serve receive, the rotation can be adjusted for first serve (see above). Alternately, the rotation can be centered on a specific player, typically the setter.

To specify how the rotations are to be adjusted, click on the **Adj Rotation button**:

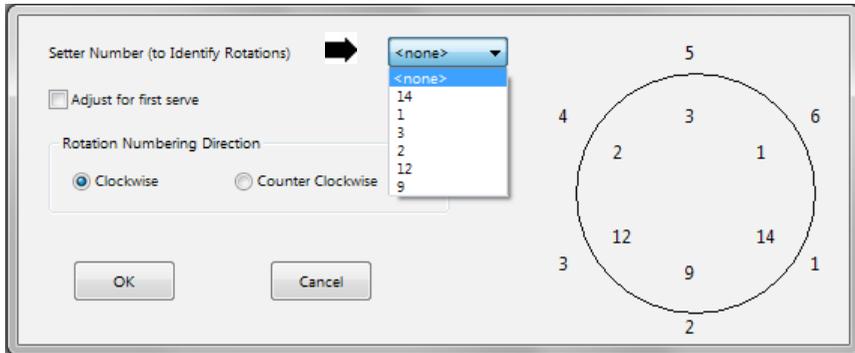

# Volleyball Ace Desktop

Then select the rotation centering by checking the **Adj for first serve** checkbox:

Alternatively, adjust the rotation centering by selecting a player from the **Setter number drop-down list**:

The result when we center around the setter is:

## Forced versus Unforced Errors

This report shows which points were the result of actions by the coach team or the result of errors by the opponent. It shows when a match may have been won against a weaker opponent due to their errors as opposed to good play by the coach team.

## Sort Order

The **Sort Order** feature of the Analyzer makes it simple to rank players based on different stats. Select **Ascending** to rank players from lowest to highest and **Descending** to rank from highest to lowest. Note that data can only be sorted using figures shown on the current report. Select the stat to be used from the **Sort On** dropdown list:

## Chapter 3 Output Options

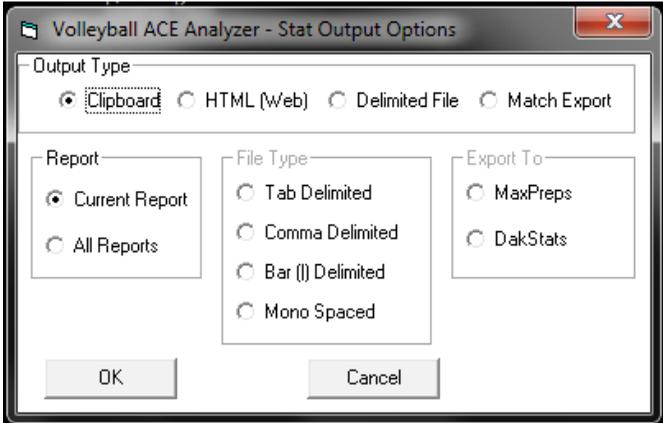

The Strategic Analyzer has a variety of output options which are selected from the command buttons at the bottom of the report screen.

Click on the **Print button** to output the current stat report to a printer.

Click on the **Output button** to output the current stat report to the clipboard or a data file. Select the type of output using the output type dialog:

Note that clipboard output can be pasted into spreadsheet, word processing and email documents, where it can be formatted, manipulated and/or emailed.

Delimited files can be opened by word processing or spreadsheet applications. The **HTML option** generates web pages. Typical web page output would look like this:

Date: 11-4-03

MVHS03

	Total Games	Attack Kills	Attack Err	Attack TA	Attack Pot.	Set Asst	Service Ace	Service Err	Recep Err	Def Dig	Blocks BS	Blocks BA	Blocks BE	Gen BME

8 Petunia.	102	10	23	65	-.200	2	6	21	45	176				1
11 Kaitlin	67	1	6	15	-.333		14	9	30	46				
12 Abby...	110	199	72	574	.221	431	45	14	21	229	3	15		39
13 Lucky..	110	79	62	279	.061	408	95	48	17	237	2	8	2	67
MVHS03....	111	984	598	2920	.132	879	341	221	270	1487	95	78	28	120

The **Match Export option** exports stats for uploading into other systems such as MaxPreps and DakStats 3000. See Chapter 5 for details on stat export features.

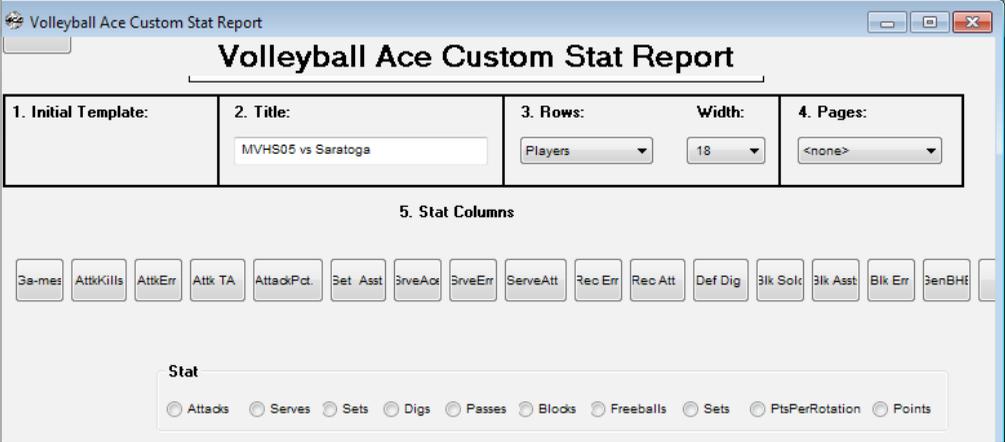

## Chapter 4 Custom Reports

In addition to the built-in reports, the Volleyball Ace Strategic Analyzer also has custom reporting. Using this feature you can create reports with the specific stats you want. Stats are selected from a series of drop-down menus and are shown as columns on the custom report.

Custom reports can use built-in reports, then add or delete columns as desired. To create a custom report, click on the **Customize** button:

The initial custom report screen will include all columns which were on the screen when the **Customize** button was clicked. Enter a Title, a Row type and a Page type, then begin editing the columns.

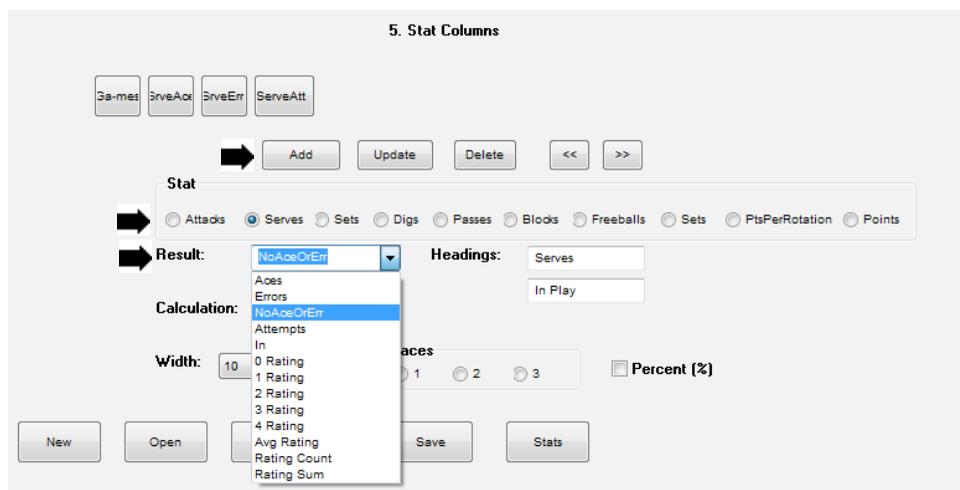

For this example, we are going to build a service analysis. Start by deleting the non-serve columns. To delete a column, tap on that column then tap on the **Delete** button.

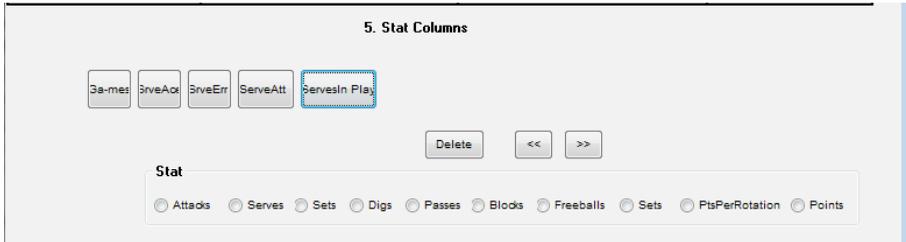

After deleting the unwanted columns, add additional columns. To add a column, tap on the type of stat (Serves) the result (NoAceNoErr) and the calculation (count).

New columns will have default headings which can be edited. Select the formatting you want using the **Width**, **Decimal Places** and **Percent options**. Then click on the **Add** button.

# Volleyball Ace Desktop

To move a column (added columns are always added as the right-most column) click on that column then click on the << or >> **button**.

The resulting stat report looks like this:

Report Type: <Custom> Rows: Players Pages: <none>  
 Row Width: 18

	Srve Sets	Srve Ace	Srve Err	Serves In Play	Serve Att
1 Abby	3	1	1	9	11
2 Summer	3				
3 Chelsea	3	2		21	23
4 Jessica	1			1	1
5 Laura	1	1		3	4
6 Christie	1				
7 Monica	2		2	11	13
8 Lauren	1	1		1	2
9 Biz	3		1	3	4
10 Elizabeth	3			10	10
11 Ali	3				
12 Kelsey	2				
14 Hillary	3		3	1	4
MVHS05	3	5	7	60	72

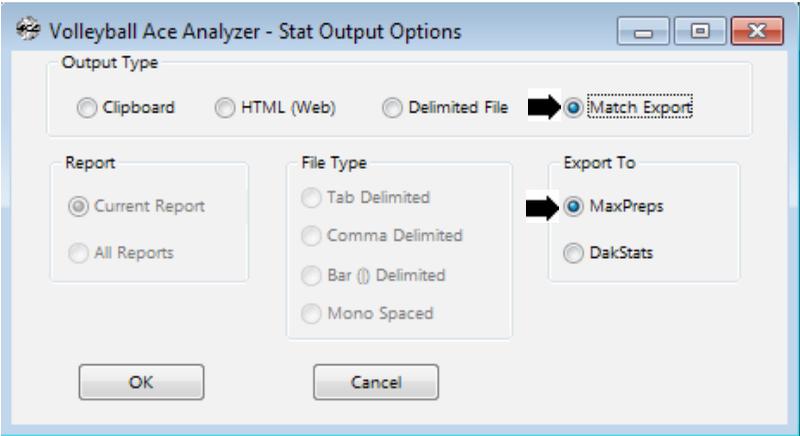

Click on the **Customize button** to return to the Custom screen to make any more changes to the custom report and to save it. Saved custom reports can be opened and reused.

# Chapter 5

## Stat Export Features

Volleyball Ace stats can be exported to other systems for league reporting and consolidation. Stat export is done using the Output features of the Strategic Analyzer. Stat export is currently implemented for use with MaxPreps and DakStats 3000.

To export data, click on the **Output** button on the stats reporting screen, then select the target for the export:

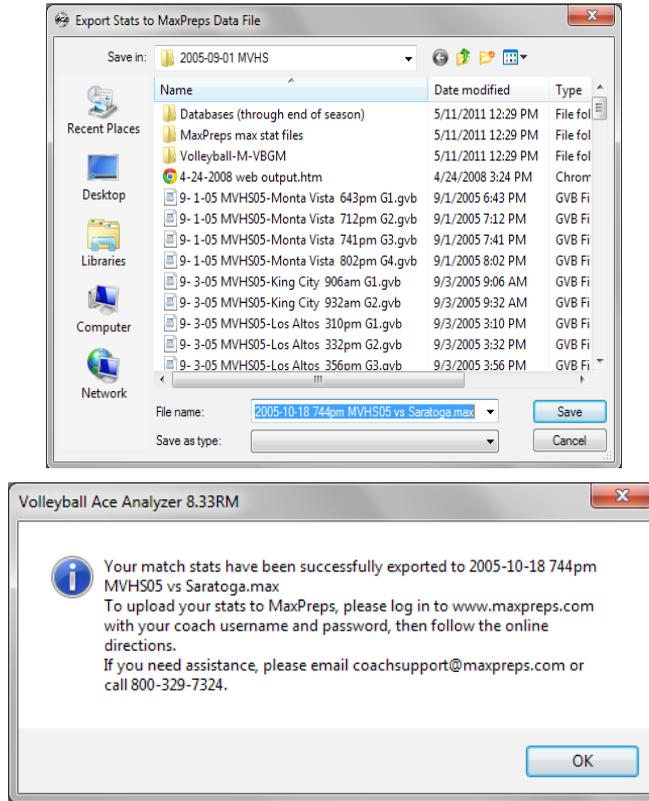

# Volleyball Ace Desktop

## Exporting Stats to MaxPreps

Click on the **MaxPreps export option**, then click on the **OK button**.

Choose the name and directory where the MaxPreps .max file is to be written, and it will be output:

Note that match data can also be exported to a .max file right on the iPad/iPhone or Android device. The output file can then be emailed as an attachment. Note that once the .max file has been created, you need to go to [www.maxpreps.com](http://www.maxpreps.com), log on to your account and upload data.

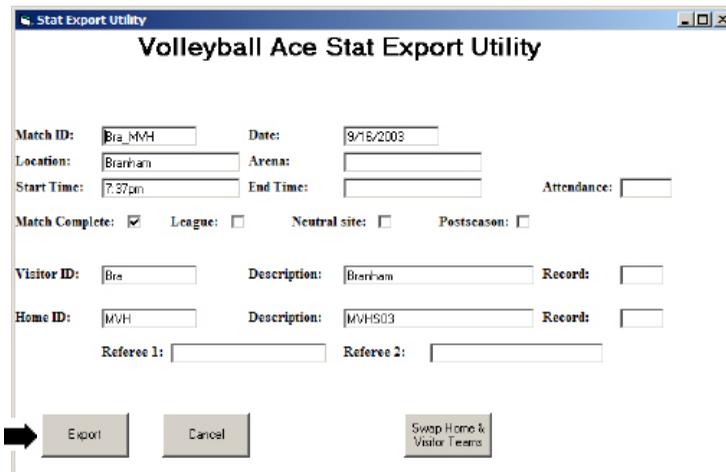

## Exporting Stats to DakStats 3000

Click on the **DakStats export option**, then click on the **OK button**.

Note that you must export data one match at a time (and select all of the sets in each match) for the process to work correctly.

The Volleyball Ace Desktop Analyzer will scan the currently selected sets of the match and display a dialog to be completed with additional match information. Complete any blank fields which are to be included in the exported match data, then click on the **Export button**.

The screenshot shows a dialog box titled "Volleyball Ace Stat Export Utility". It contains several input fields and checkboxes for match information. The fields are as follows:

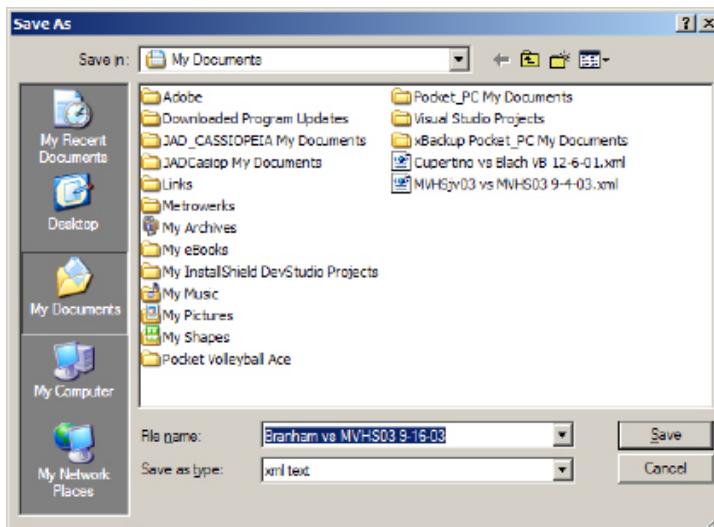

Match ID:	Bra_MVH	Date:	9/16/2003				
Location:	Branham	Arena:					
Start Time:	7:37pm	End Time:		Attendance:			
Match Complete:	<input checked="" type="checkbox"/>	League:	<input type="checkbox"/>	Neutral site:	<input type="checkbox"/>	Postseason:	<input type="checkbox"/>
Visitor ID:	Bra	Description:	Branham	Record:			
Home ID:	MVH	Description:	MVHS03	Record:			
Referee 1:		Referee 2:					

At the bottom of the dialog, there are three buttons: "Export" (with a black arrow pointing to it from the left), "Cancel", and "Swap Home & Visitor Teams".

# Volleyball Ace Desktop

Note: It is a good idea to make a note of the folder where the export file is being written so it is easy to locate in the DakStats import step.

Confirm the name of the export file then click on the **Save** button.

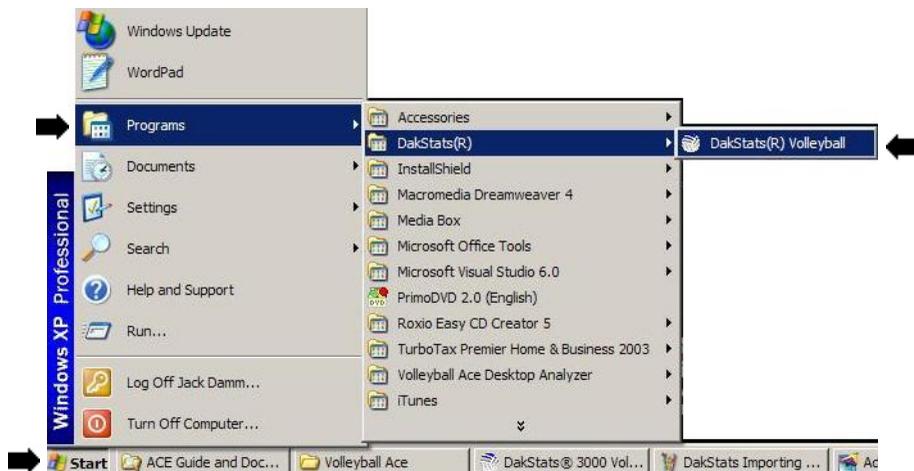

Click on the **Ok** button.

This is all you need to do to create the stat output file from the Analyzer. You can exit the Volleyball Ace Analyzer unless you want to export more data or review other stats.

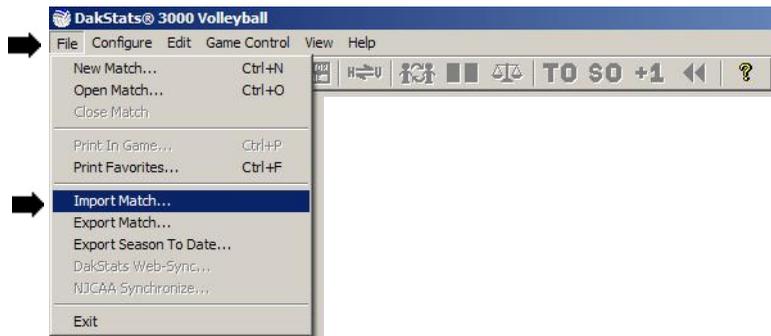

# Volleyball Ace Desktop

When the match stats have been exported from Volleyball Ace, they can be loaded into DakStats 3000 using the **Import Match** option on the **File menu**.

Run DakStats 3000:

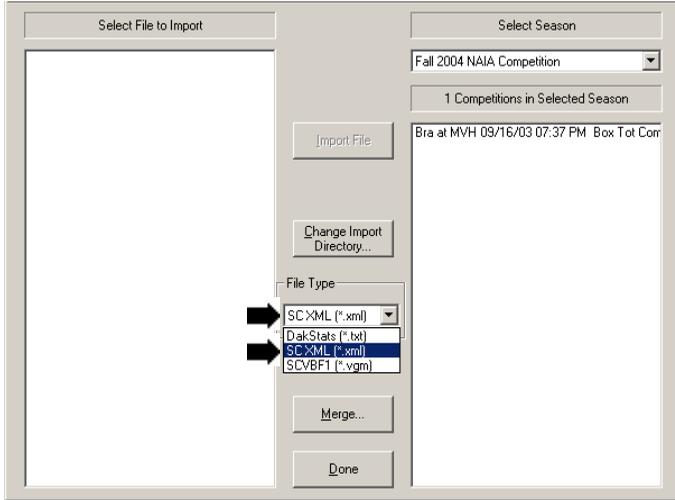

Select “Import Match” from the **File menu**:

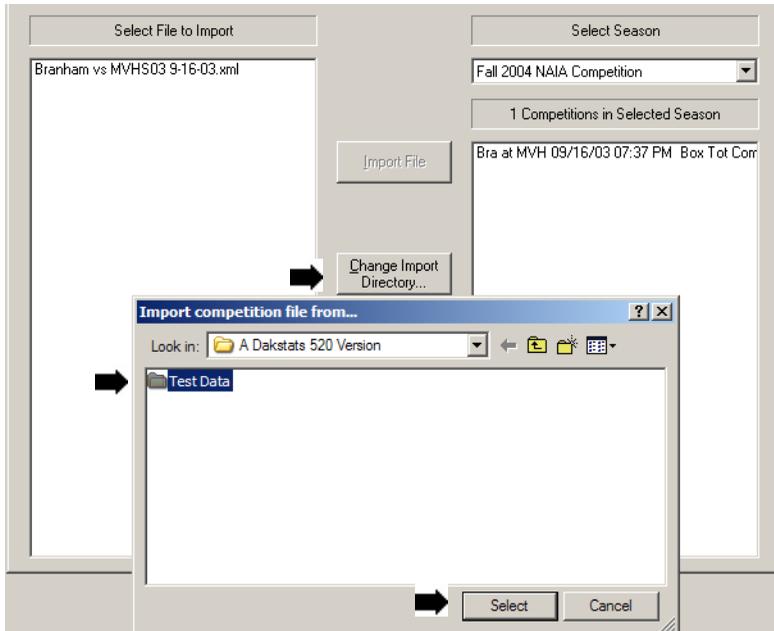

Set the File Type to import from “SC XML (\*.xml)” type files:

# Volleyball Ace Desktop

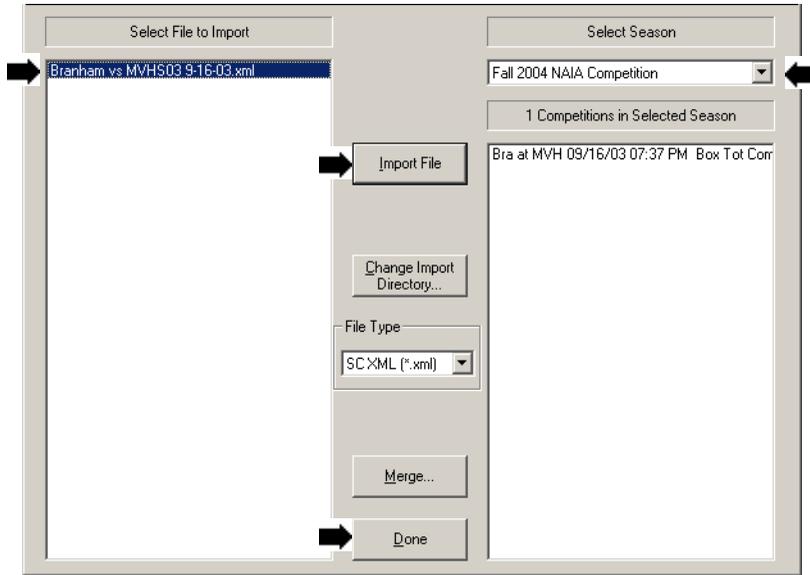

Click on the “Change Import Directory” button and select the directory (folder) where the Volleyball Ace match data was written:

Verify that you are importing data into the proper season. Use the drop-down list to select the correct season if necessary.

Select the match data file and click on the “Import File” button.

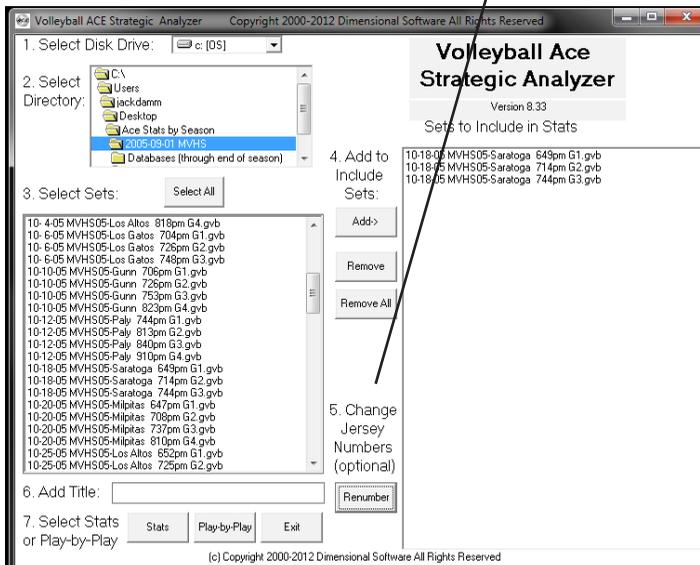

Click on the **Done button** when the import has completed. Your Volleyball Ace stats are now in DakStats and can be used to update conference data.

## Chapter 6 Player Renumbering

### “Coach I Lost My Jersey ...”

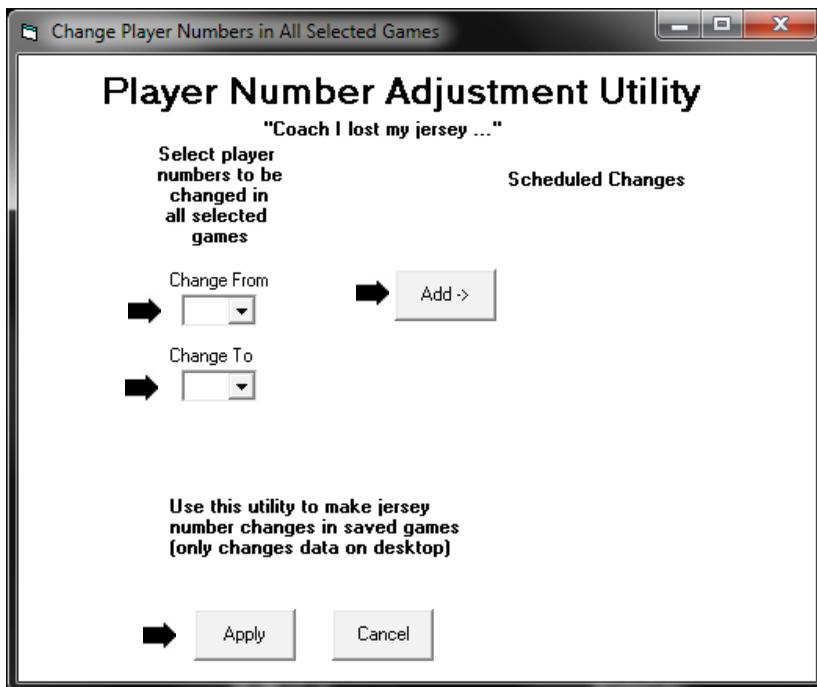

There are several reasons why player stats may be collected with different numbers for the same player during the course of a season. In order to report those stats in a consistent fashion, it is important to be able to renumber the players in selected sets.

The Volleyball Ace Desktop Analyzer includes a utility function which can be used to renumber players. Run the Analyzer, select the sets which are to be modified, and tap on the **Renumber** button (**5. Change Jersey Numbers-optional**)

On the Player Number Adjustment Utility screen, pick the **Change from** and **Change to numbers** from the drop-down lists and click on the **Add button**. Do this for all the numbers to be changed.

When the list of scheduled changes is complete, tap on the **Apply button** to have the changes made.

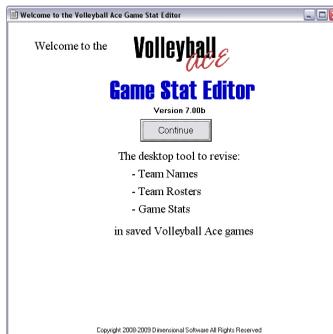

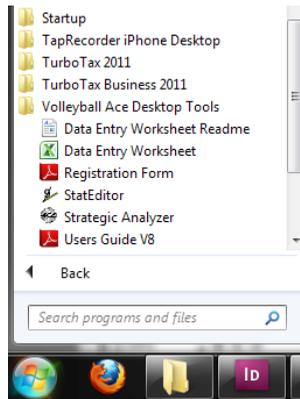

Note: Changes are made only to sets on the desktop, not on the handheld. Also note that the original set file is saved in the same directory on the desktop with a .bak extension.

Also note: The StatEditor also includes a player renumbering feature.

## Chapter 7 StatEditor

The StatEditor is a desktop utility which can be used to make changes to Volleyball Ace stat files.

To run it, click on the Start button, select All Programs, click on Volleyball Ace Strategic Analyzer Tools and then click on the StatEditor:

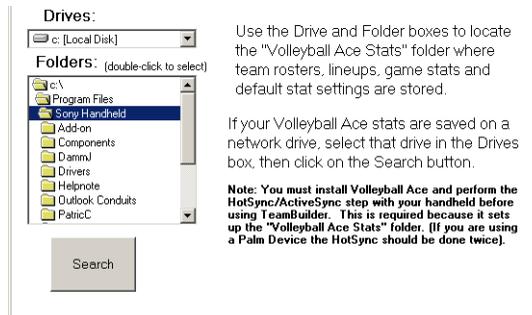

Click on Continue.

The StatEditor starts by searching for the folder on the desktop where Volleyball Ace stat files will normally be saved.

If you click on the **Browse** button or if no Ace Volleyball Stats folders were found, you can browse through the folders on your desktop computer to locate them:

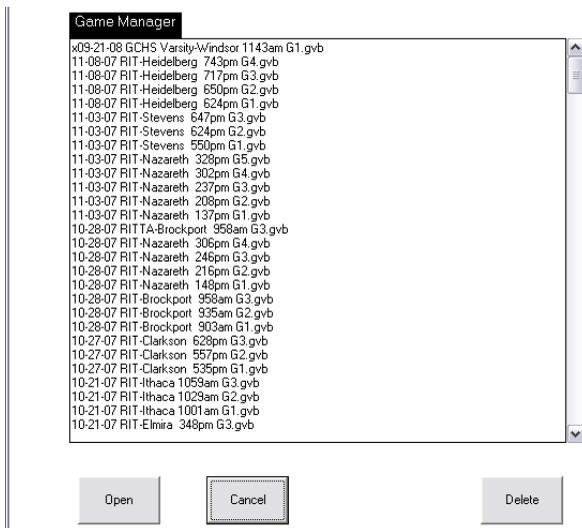

**Important note:** This version of the StatEditor requires that the Volleyball Ace stat files be located in a folder named, “ACE Volleyball Stats”. If the stat files are not in that folder, then create a folder with that name and put the stat files into it. We plan to remove this restriction in future versions.

# Volleyball Ace Desktop

## Select a Set to Edit

Select the set to edit from the list of sets in the currently-selected folder:

## Main StatEditor Screen

The **StatEditor** screen gives you access to all of the StatEditor features.

Change the match and set information directly on the main screen. To change rosters click on **Edit Roster** buttons. Click on **Change Jersey Numbers** button to renumber players for this game.

Click on the **Edit Rallies** and **Events** button to edit stats using the Rally-by-Rally editing screen. Click on **Adjust Score/Rotations** button to automatically recalculate the set score and correct rotations after changing rallies.

Adjust

Score +     Rotate     Substitutions +     Timeouts +  
 Score -     Unrotate     Substitutions -     Timeouts -

Type of Event

Rally     Substitution     Rotate     Timeout     Adjustment

Type of Event

Rally     Substitution     Rotate     Timeout     Adjustment

Rotate (Player positions are after rotation)

Pos #4	<input type="text" value="12"/>	Pos #3	<input type="text" value="7"/>	Pos #2	<input type="text" value="1"/>
Pos #5	<input type="text" value="11"/>	Pos #6	<input type="text" value="4"/>	Pos #1	<input type="text" value="6"/>

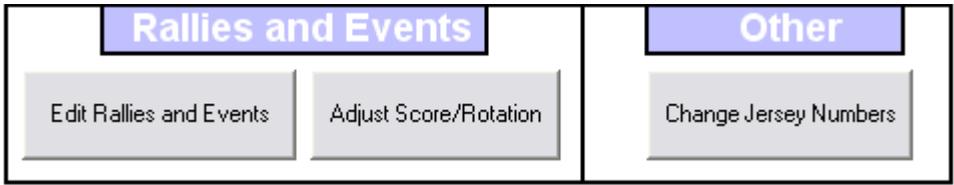

Note that rotation records actually contain the lineup in the set at the time that the rotation occurs. (This is important if triple blocks have been recorded, as Volleyball Ace gives a block assist to each of the three players in the front row at the time of the block).

## Player Number Adjustment Utility

There are several reasons why player stats may be collected with different numbers for the same player during the course of a season. In order to report those stats in a consistent fashion, it is important to be able to renumber the players in selected sets.

The StatEditor provides the capability to change player numbers so that stats can be reported for that player in a consistent fashion. This is similar to the renumbering features of the Volleyball Ace Strategic Analyzer, except that the StatEditor changes numbers for only one set at a time.

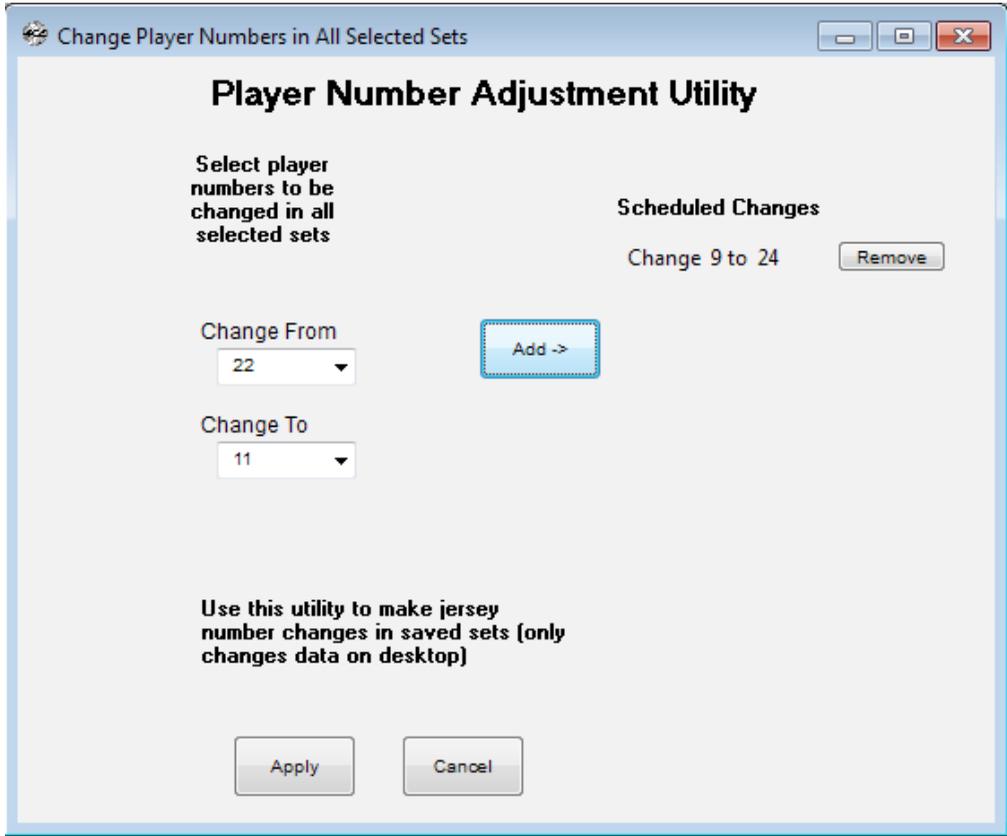

To use the Player Number Adjustment Utility, click on the **Change Jersey Numbers button** on the main screen:

On the **Player Number Adjustment Utility screen**, pick the **Change from** and **Change to** numbers from the drop-down lists and click on the **Add button**. Do this for all the numbers to be changed.

When the list of scheduled changes is complete, tap on the **Apply button** to have the changes made.

# Volleyball Ace Desktop

## Save Changes

When all of the changes have been made to the currently-opened set using the StatEditor, click on the Save button:

## Volleyball Ace Desktop

The first time a set is modified and saved, the StatEditor makes a backup copy under the original name with an added extension of .bak.

When the edited set has been saved, the StatEditor confirms that it has been saved:

The set can now be used for stat reporting in the Volleyball Ace Strategic Analyzer.

# Chapter 8

## Data Entry Worksheet

There may be occasions when you want to put manually-recorded stats or adjustments into the Volleyball Ace set stat format so that the data can be combined with the rest of the sets started with Volleyball Ace.

The Volleyball Ace Data Entry Worksheet is an Excel spreadsheet that can be used to enter these stats and adjustments. Once stats have been entered into the worksheet, a built-in macro outputs the data to a file in the Volleyball Ace game format. Each set file created in this fashion can be accessed using the Volleyball Ace Strategic Analyzer so that complete season-to-date stats can be viewed together using the Analyzer.

To use the Data Entry Worksheet, run Excel and open the spreadsheet, “Volleyball Ace Stats Data Entry Worksheet.xls” You must enable macros. Enter values for the date, time, coach team name and opponent team name. These are important because they are used in creating the name of the saved stats file.

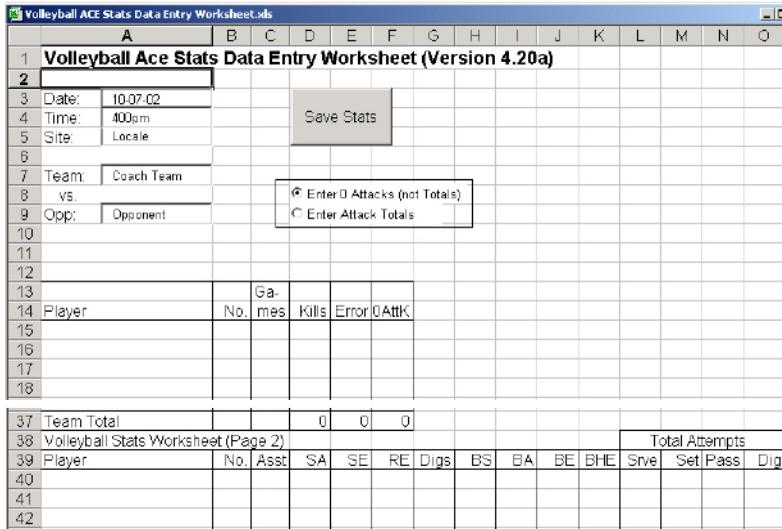

Next, enter player names, player numbers and the relevant stats. For adjustments, you can enter negative amounts.

When you have entered the data, tap on the “Save Stats” button. This will activate a “macro” which creates a Volleyball Ace stat file with this data. Note that the macro also renames and saves the current worksheet under a similar name. This macro does include a number of edits so that invalid entries should not cause problems. It is critical that the positions of cells where data is entered are not changed, since these are not flexible in this worksheet.

# Volleyball Ace Desktop

Note that team set counts and set scores are not available with this version of the data entry worksheet. Also note that you can make entries in other cells in the worksheet and use references to put the figures into the cells where the worksheet macro expects them. (This can be useful if your worksheets are in a different order than this spreadsheet calls for them). Again, you must put the stats into the proper cells and you must not move these cells or insert rows or columns to cause them to be moved.

This spreadsheet generates Volleyball Ace set files with a .gvb extension that is the same format as sets transferred from Apple and Android devices. You should move them into the proper directory where your other set files are stored on your PC. Note that you can select that directory in the Save As dialog which the Excel macro calls.

Make sure to tap on the **Save Stats** button which activates the macro to output the data. Note that the macro also saves a copy of the worksheet as an Excel file under the same name as the data file is created.
